**ESYLUX AFi LED and AF S LED series  
Wall floodlights with the latest LED technology**

In today's world it's ever more important to save energy, both in domestic and commercial settings, so as to play an active part in environmental protection.

By using the new ESYLUX wall floodlights with energy-efficient LED technology, you not only save energy but also over 90% of the cost when compared to similar halogen floodlights. In addition to greatly reduced electricity consumption, further cost savings can be made thanks to the long life of LEDs which last much longer than energy-saving or halogen lights, so fewer changes are needed.

The LED wall floodlight has 8 high-power 3 watt LEDs, corresponding roughly to the power of a 300 W halogen floodlight. The LED version produces bright and far-ranging lighting and is therefore certainly worthy of comparison with a 300 W halogen floodlight.

An additional energy saving can be achieved by models with an in-built motion detector as lighting is activated automatically only when it is needed. Various alignment options for the floodlight and detector ensure that a suitable position can always be found.

Thanks to the Mobil-RCi-M remote control (available as an accessory), the installer and end user can quickly and precisely set the switch-on light value according to personal requirements. With the remote control, the floodlight can also be set to continuous light ON/OFF for max. 12 hours without needing to install an additional switch. These commands can be performed from the ground at the touch of a button without needing to climb a ladder.

Thanks to their modern design and choice of three colours – white, black and stainless steel appearance – the ESYLUX LED floodlights will fit in perfectly with any type of architecture.

All versions are quick and easy to install. This is ensured by ESYLUX's well-known one-handed plug base installation and double diaphragm line entrance, located optionally on the top, bottom or rear of the device. A special bracket for practical mounting on inner or outer corners is available as an accessory.

ESYLUX products are available from electrical wholesalers.
