Ahrensburg, Germany, 12 January 2023

Energy-saving sensor technology is now even easier to use: ESYLUX presence detectors for ceiling mounting

Manufacturer ESYLUX has added a wide range of new variants specially designed for ceiling mounting to its portfolio of presence and motion detectors. The units are well-known and field-proven devices from the BASIC, COMPACT and FLAT series; the new variants now also include installation brackets with spring clips. This simplifies installation and, because everything is covered by a single item number, it also simplifies the ordering process. The control technologies used by the detectors range from ON/OFF and KNX to the DALI-2 industry standard.

It is more important than ever to save energy, which is why offices, educational institutions and healthcare facilities should upgrade in good time to modern LED lighting and to a sensor-based, demand-dependent lighting control system. To make this process easier, manufacturer ESYLUX has expanded its portfolio of presence and motion detectors to include a wide range of new variants.

Twenty-one detectors for ON/OFF, KNX, DALI and DALI-2

There are 21 detectors in total, all of which are well-known and field-proven devices whose previous variants were only intended for flush mounting and could only be installed using other methods by purchasing the appropriate accessories. To simplify both the ordering process by using only one part number and to simplify the installation itself, ESYLUX has developed new variants of these

detectors. These new variants feature an installation bracket with spring clips as standard and are therefore pre-prepared for ceiling mounting; a dust-protected box is also included.

The new detectors are available in the entry-level BASIC series, the versatile COMPACT series and the flush-profile FLAT series and offer versions for different control technologies. These range from a simple ON/OFF switch to presence- and daylight-dependent constant lighting regulation with KNX, DALI or DALI-2. The DUO DALI presence detectors from the COMPACT series offering offset regulation of two light channels and an optional orientation light are now also available in a ceiling-mounted version.

About ESYLUX — performance for simplicity

ESYLUX develops, manufactures and distributes intelligent automation and lighting solutions for improved quality of life and energy efficiency in office buildings, educational institutions and medical facilities. People's requirements and needs are central to the company's activities. ESYLUX places particular value on the simple application of its product solutions. ESYLUX customers and partners include wholesalers, installation companies, electrical and lighting planners and architects, who put their trust in more than 50 years of market experience and the personal, specialist advice provided by ESYLUX experts. Furthermore, ESYLUX meets the highest quality standards in research, development and production at its German site in Ahrensburg. Our sales organisation is global: ESYLUX operates in collaboration with experienced trading partners and is represented by numerous distribution companies in Europe, Asia and Oceania.
